6T330-430-530 / DT6 230-330

Tried and tested De Dietrich technology

- >> Reliability and long life
- >> Highly efficient
- >> Large output range

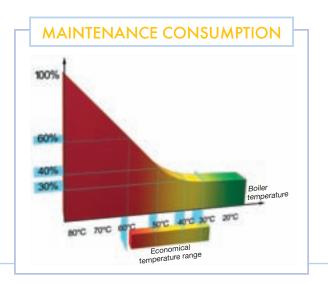

EUTECT® CAST IRON:FOR RELIABLE AND LONG-LASTING BOILERS

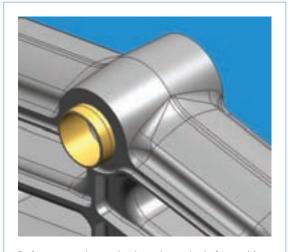

Low temperature boilers benefit from the experience of De Dietrich as a foundry since 1684. The material used, **eutectic®** cast iron, involves a very specific manufacturing process, developed to obtain defined mechanical properties and perfectly adapted to quality boilers with a remarkably long life.

>> IDEAL PROPERTIES FOR LOW TEMPERATURE

- The resistance to corrosion of eutectic® cast iron allows no return temperature limit.
- Its castability enables it to be spread homogeneously and harmoniously in the moulds and to acquire an uniform and constant thickness of the walls, which affords highly appreciable possibilities for the use of the low temperature technique.
- It lets you create substantial and optimised thermal exchange surfaces.
- The three-pass flue ways lets you control the course of the flue gases.

>> A SOLUTION FOR ALL CONFIGURATIONS

Perfect watertightness thanks to the method of assembly by bispheric nipples and silicon joints while limiting propagation of sound waves, enabling silent operation.

Low temperature boilers in the DTG and GT ranges satisfy the most diverse situations and constraints.

- A broad range of outputs: between 54 and 1450 kw (46 to 1250 Mcal/h), and even more in the case of installations in cascade;.
- Solutions to access problems even in the tightest corners: boilers can be delivered in separate sections, thanks to the flexibility of use offered by sectional boilers.

>>

EXAMPLE OF INSTALLATION

OPERATING PRINCIPLE

Installation of 2 boilers in cascade with 3 circuits with mixing valve + 1 domestic hot water circuit connected to the GT 330, 430 or 530 DIEMATIC-m3 master boiler, and 2 circuits with mixing valve connected to boiler no. 2: GT 330/430/530 K3, all of these circuits behind a decoupling tank.

>> Performances and simplicity

DIEMATIC system: efficient and intelligent.

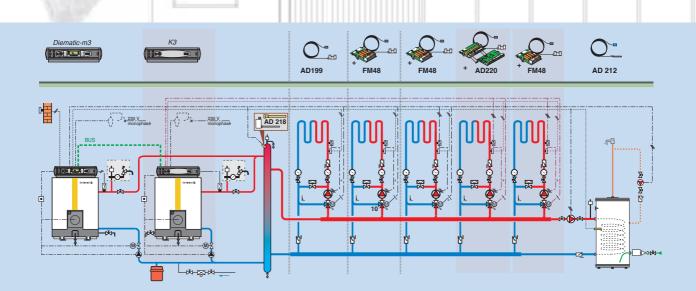

- The programmable control unit acts on the burner (depending on the model: 1, 2 stage or modulating) according to outside air temperature.
- It manages up to 10 boilers in cascade and 40 variable temperature zones.
- A user-friendly conversational interface with a backlighted display makes it **easy to use**.
- Building management system is possible via 0-10 V signal plug.

Reliability, energy savings, protection of the environment, silence and optimal comfort: De Dietrich offers a large range of robust and reliable oil or gas burners, with power ranging from 16 to 2 290 kW (13 to 1970 Mcal/h).

Fuel and fuel air flows are factory preset. Ideal for De Dietrich boilers, they adapt easily to other brands on the market.

The LT range consists of low temperature boilers, to be fitted with a oil or gas burner, with 4 possibilities for control panels (standard, B3 ,K3 or Diematic m3).

Three-pass flue ways, with a large design combustion chamber and horizontal flue ways with fins enables optimisation of heat exchanges.

- High efficiency (** classification according to the European Directive 92/42 CEE)
- \bullet High annual combustion efficiency : 96 %
- Hygiene of optimal combustion and minimal NOx and CO emissions
- Low sound level

A burner door mounted on reversible hinges (choice of which way to open), sweeping doors and large flue ways, sweeping traps on the rear smoke box.

- Easy access from the front for maintenance and sweeping
- \bullet Low temperature operation with modulated flow from 30 °C or 40 °C

Delivery by package, separate sections or assembled body on request.

Sections in eutectic® cast iron, guaranteeing remarkable resistance to heat variations, thermal shocks and corrosion.

• Possibility for a total stop between two heating periods (cold start)

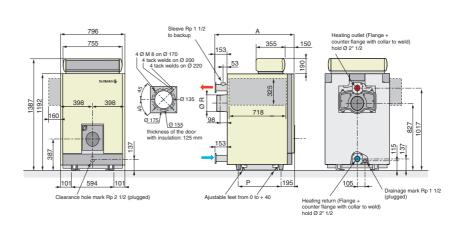

Mounting on a base frame.

Mounting anywhere, existing boiler room or new installation

Pre-set flow switch on GT430 and GT530.

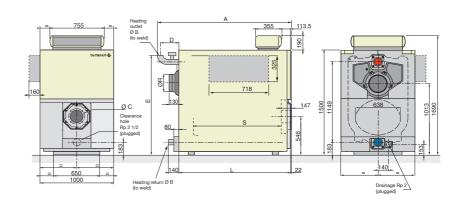

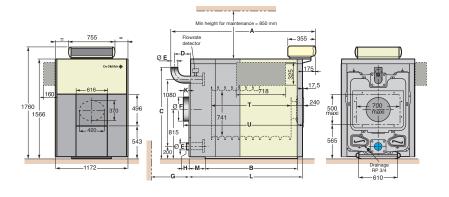

□T □□□ - from 300 to 780 kW

□T 5∃□ − from 348 to 1450 kW

The \Box TC range consists of low temperatrature gas atmospheric boilers, with 2-stage low-NOx total pre-mix burner (NOx < 70 mg/kWh), or 2-stage atmospheric burner (NOx < 260 mg/kwh) and 3 possibilities for control panels (B3, K3 or Diematic m3).

Eutectic® cast iron section with large exchange surfaces.

High efficiency (** classification according to the European Directive 92/42 CEE)

Cast iron section with large exchange surfaces with moulded spikes, mounted on a base frame, limiting thermal bridges to the floor, and strong insulation.

• High annual operating efficiency: up to 96%

An atmospheric burner without fan.

Eco.NOx total pre-mix burner.

- Low sound level
- Hygiene of optimal combustion and minimal NOx and CO emissions.

Delivery by package, separate sections or assembled body on request.

• Mounting anywhere, existing boiler room or new installation

Sections in eutectic® cast iron, guaranteeing remarkable resistance to thermal shock and corrosion.

An upper inspection hole.

 \bullet Low temperature operation with modulated flow from 30°C or 40°C

A burner-draw system

• Easy access for maintenance and sweeping

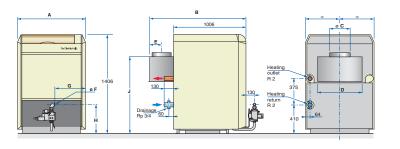

>> DTC 230 - from 54 to 117 kW

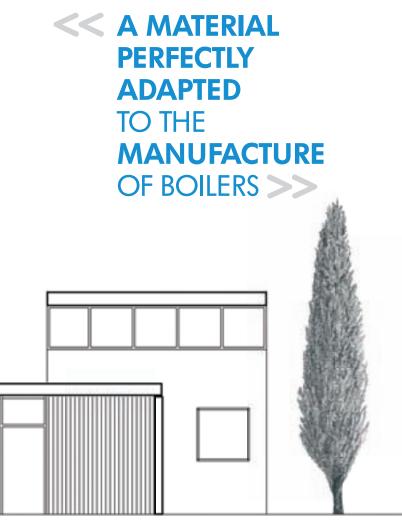

>> DTG =30 - from 119 to 380 kW

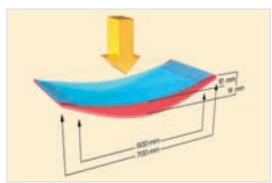

Substantlal flexibility

• A very homogeneous structure providing **substantial resistance** to corrosion and an extensive life span: eutectic® cast iron only corrodes on the surface.

In addition, tests reveal an annual corrosion of less than 0.1 mm, whereas max authorised erosion is $3\ \mathrm{mm};$

• Very low thermal expansion coefficient compared with other materials and consequently considerable resistance to thermal shocks.

It expands 20% less than steel and 2.3 times less than aluminium (laboratory tests on a 1 m long piece at 100°C).

• 30% greater flexibility than grey cast iron traditionally available on the market.

A MARK OF EXCELLENCE

For 300 years, De Dietrich's success was based on some key fundamental values: quality, reliability, durability. Through its concern for the environment and for your comfort, De Dietrich has now a comprehensive understanding of the various renewable energies through multi-energy systems that protect the planet. Therefore, heating appliances which bear the De Dietrich name are at the cutting-edge of innovation and have the advantage as they benefits from the commitment and the on-going expertise of their 2400 employees.

De Dietrich: choosing Sustainable Comfort®
